

INSTRUCTIONS

A1 FIGHTING WEDGE ##43

DESCRIPTION:

The A1 Fighting Wedge slides between the car door and the weather stripping on the door frame. Squeeze the pump to inflate the wedge, separating the car door from the frame. Under normal conditions this process will allow ample room to insert a car-opening tool. Do Not over-inflate the wedge.

Multiple Fighting Wedges can be used for installing windows and doors, or for holding doors open while installing hardware.

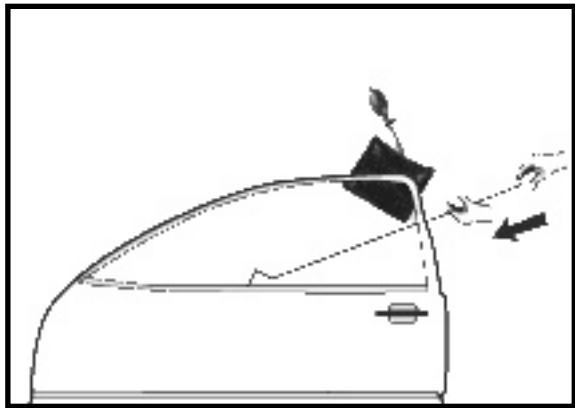

The Fighting Wedge is equipped with a bulb pump and superior push-button release valve for quick and easy inflation / deflation.

OPERATION:

Insert the deflated wedge between the door and the weather-stripping at the top corner the car door furthest from the hinges.

Squeeze the pump to inflate the Fighting Wedge creating a gap between the door and the weather stripping. Do Not over-inflate

Insert a car-opening tool below the Air Fighter-S and unlock the car.
Press the release valve to deflate.

INSTALLING WINDOWS AND DOORS

A1's Fighting Wedge simplifies installation of windows & doors. Slide multiple wedges in place & inflate (see diagram)
